Visio Visio 2013 supports a number of APIs for customization and automation. These include VSTA, VSTO, Visual Basic for Applications (VBA) and Python for VSTO. Visual Basic for Applications (VBA) is an application programming interface (API) in Microsoft Office Visio. The most well known applications that use VBA to run automation code is Microsoft Visio. It was first added to Visio Professional 2003. It is one of the primary tools used in creating Visio diagrams and charts. VSTO (Visual Studio Tools for Office) is the framework that allows .NET code to be created. These extensions can be installed into Visio and use the functionality that is provided by Visio. This includes feature such as Document Events, Extension Objects and Document Properties. The automation of Visio features can be done using these tools. VSTA is the framework that allows VBScript code to be created. This can be installed into Visio and is used to run automation code in Visio. The automation of Visio features can be done using this tool. The Python for VSTO platform allows programmers to develop in Python and have it execute in Microsoft Office applications. This allows the development of automated Visio diagrams and charts. Some products, such as VisioPro 2013, provide the ability to integrate code in other languages into Visio. These languages allow the user to integrate the code with the drawing by creating custom objects. MathWorks provides an API for Visio that allows MathWorks functions to be executed in Visio. This allows Visio to display functions as a chart, and formulas to be executed. Visio supports macros. Macros are recorded steps that perform a specific task. The user starts recording a macro and then stops it. A macro can be recorded by clicking in the drawing area. The user must then right click the object that they wish to record the macro of and select from the context menu the actions they wish to record the macro of. Visio is available for the following operating systems; Windows 7, Vista, Windows XP, Windows 2000, Windows 8, Windows 95, Windows 98, Windows NT 4.0, Windows 2000, Windows ME and Windows CE. History The Visio graphical office suite for the Macintosh was first released for the Apple Macintosh in 1987, with a release of Version 1.0 on May 5, 1987. The product was first released as a share a1d647c406
