It uses encryption so your data is safe, and it gives you the means to connect securely in both directions. No hoops to jump through, and functionality is provided in a clean interface. Want to try it for yourself? Download the Free Trial from the Apple App Store. OS X has a wide range of build-in tools used for system maintenance. Users might expect some of them to be more efficient and lightweight, but that's not always the case. The following command-line applications offer essential tasks for on-the-go Mac users. Finder First things first: The Finder is Apple's default file manager. It offers a number of tools to handle various tasks and functions, including a superfast search option to explore all your folders. When you double-click a folder, the Finder will open automatically. If you want to open the current folder with Finder, simply press the Apple key followed by the T key. A right-click can be used to select multiple files or folders. However, when working with a folder containing multiple files, a single-click will cut the selection. While a double-click opens multiple copies of the same file or a folder containing multiple files, a single-click will open the first file or folder. While in some cases the Finder can be replaced with a more capable option, having a working file manager on your Mac is a must. Disk Utility Disk Utility is a built-in application for maintenance and management of hard disks
